

Table I. Selected Species and Impact Variables

Notes:

CALFED Action:	<p>A - Assessment Variable could be affected by conveyance and storage components that are variable between the different CALFED alternatives.</p> <p>B - Assessment Variable could be affected by the Water Quality Program common to all CALFED alternatives.</p> <p>C - Assessment Variable could be affected by the Ecosystem Restoration Program common to all CALFED alternatives.</p>
Species Response:	<p>Level refers to the response rating assigned by CALFED in the preliminary tables (dated September 6, 1996)</p> <p>Variation refers to the response ratings assigned by participants in the assessment process.</p> <p>2 = critical to species abundance</p> <p>1 = may be critical to species abundance</p> <p>0 = minimal effects on species abundance</p> <p># = "blank", species response is unknown</p> <p>NA = not applicable to the species.</p>
Affected Life Stages	Indicates that the assessment variable may affect primarily adults, eggs, larvae, or juveniles or that all life stages may be affected.
